DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 21 June 2010 has been entered.

Response to Arguments

Applicant's arguments, see pages 8-12, filed 21 June 2010, with respect to the rejections of claims 1, 5, 6, 8, 12, 14 and 17-20 under 35 U.S.C. 102(b) and the rejections of claims 2-4, 7, 9-11, 13, 15 and 16 under 35 U.S.C. 103(a) have been fully considered and are persuasive. The rejections of claims 1, 5, 6, 8, 12, 14 and 17-20 under 35 U.S.C. 102(b) and the rejections of claims 2-4, 7, 9-11, 13, 15 and 16 under 35 U.S.C. 103(a) have been withdrawn. Further, Examiner notes that Applicant's present amendments to the claims overcome the previously cited prior art references. Further, Examiner has not discovered any additional prior art which fully teaches any of the present claims. Accordingly, the application is now in condition for allowance.

Allowable Subject Matter

Claims 1-20 are allowed.

The following is an examiner's statement of reasons for allowance:

Independent claim 1 recites an image processing apparatus. The apparatus comprises (1) a halftone dot characteristic detecting section that detects a halftone dot characteristic indicative of a halftone dot in image data, (2) a first counter that counts the number of halftone dot characteristics that exist in a first region including a target pixel from among halftone dot characteristics detected by the halftone dot characteristic detecting section, (3) an edge pixel detecting section that detects a pixel belonging to an edge region based on image data, (4) a second counter that counts the number of edge pixels that exist in a second region including the target pixel from among edge pixels detected by the edge pixel detecting section, and (5) a discriminator that discriminates whether or not a region that includes the target pixel is a character region in a halftone dot region based on the count result of the first counter and the count result of the second counter.

Examiner has not discovered in the prior art each and every feature recited in claim 1. The closest prior art discovered is Kim (US-5,754,684) which, while teaching many aspects of claim 1, does not teach that the discriminator discriminates whether or not a region that includes the target pixel is a character region in a halftone dot region based on the count result of the first counter and the count result of the second counter. The discriminator in Kim operates with respect to image region blocks, and not with respect to regions within regions in the manner recited in claim 1.

Additional relevant prior art includes Matsukubo (US-6,504,949), Fujiwara (US-4,813,078), and Kumashiro (US-5,341,227), all of which were previously cited. However, none

of these reference teach the discriminator recited in claim 1 or otherwise make up for the deficiency of Kim. Further, Examiner has not discovered any other prior art which teaches each and every limitation of claim 1, either in a single reference or in an obvious combination of references. Accordingly, claim 1 is deemed to be allowable over the prior art.

Claims 2-7 and 15-17 each ultimately depend from claim 1, and are therefore also deemed to be allowable at least due to their respective dependencies from an allowable claim.

Independent claim 8 recites an image processing apparatus. The apparatus includes a discriminating unit which performs the functions deemed to render claim 1 allowable over the prior art. Thus, claim 8 is deemed to be allowable for the reasons set forth for claim 1.

Claims 9-13 and 18 each ultimately depend from claim 8, and are therefore also deemed to be allowable at least due to their respective dependencies from an allowable claim.

Independent claim 14 recites an image processing method. The method performs image region discrimination in the same manner as the discriminator recited in claim 1. Thus, claim 14 is deemed to be allowable for the reasons set forth for claim 1.

Claim 19 depends from claim 14, and are therefore also deemed to be allowable at least due to its dependency from an allowable claim.

Independent claim 20 recites an image processing apparatus. The apparatus includes a discriminator which performs the functions deemed to render claim 1 allowable over the prior art. Thus, claim 20 is deemed to be allowable for the reasons set forth for claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
